

Virtual Environment Setup

ExInt II · WU Vienna · SS 2026 — Python environment checklist for students

One-time setup	Every session
1. Navigate to project <code>cd sme-internationalization</code>	7. Navigate to project <code>cd sme-internationalization</code>
2. Create virtual env <code>python -m venv .venv</code>	8. Activate <code>.venv\Scripts\activate</code> (Win) <code>source .venv/bin/activate</code> (Mac/Linux)
3. Activate <code>.venv\Scripts\activate</code> (Win) <code>source .venv/bin/activate</code> (Mac/Linux)	— <i>Do your work</i> run scripts, open JupyterLab, etc.
4. Install packages <code>pip install -r requirements.txt</code>	9. Deactivate when done <code>deactivate</code>
5. Freeze versions <code>pip freeze > requirements.txt</code>	
6. Deactivate when done <code>deactivate</code>	

Key point: Steps 4 and 5 run only once. After the first setup the `.venv` folder already has all packages installed — next time just activate and start working. On Mac/Linux replace `.venv\Scripts\activate` with `source .venv/bin/activate`.
